

## INTERACTIVE ART PROJECT "CLIMATE FORESTS"

The German Forestry expresses the concern for the forests threatened by climate change through this interactive work of art calling to:

LET'S STOP **CLIMATE** CHANGE!  
SUSTAIN **FORESTS** – THE RESOURCE OF FUTURE.

An artist builds a 5 to 8 m high sculpture from wood residues. The globe is carried by a big tree and is supported by two humans to the right and left. . The artist will start on the first day of the conference, meaning that the sculpture will "grow" in the course of the conference and in front of the delegates and visitors.

This creates a tree that symbolizes the role of the world's forests in respect to climate change. Strengthened by the contributions of people who have left their thoughts and wishes in its wooden planks, at the end of the conference the work of art will become a symbol of the global mission and a joint effort to preserve the forests, the resource of future.

Parallel to the completion of the tree, large tree leaves are being attached, representing the tree diversity on the continents: maple, oak, ginkgo etc. The artist, who processes the wood into a work of art, is himself a forestry man from Bavaria. He stands for the men and women who, with expertise, experience and a lot of personal commitment, try to prepare the forests in Germany as well as possible for climate change and as resources for the future.

With the slogan "Be Part of the Art" the conference participants are asked to document their thoughts, desires, visions and messages onto the wooden planks used in the sculpture.

BE PART OF THE ART – WRITE YOUR  
**MESSAGE**  
OF FUTURE ON A BOARD

So please, take part and "swing the hammer"!

UNITING FOR CLIMATE ACTION –  
FURTHER, FASTER, TOGETHER  
OFFICIAL CLIMATE PARTNER
